

Fortis. For antibodies and affinity reagents.

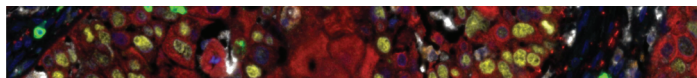

Bethyl, now a Fortis Life Sciences brand, has been making antibodies since 1972 and has established a global reputation for quality, consistency and first-class customer care. Every antibody that we sell is manufactured to exacting standards and is validated in-house by our highly experienced team of scientists. From the veterinary facilities to the development, production, and validation labs, the entire team focuses on delivering quality products and delighting customers.

Our antibodies have been validated for many types of immunoassays including flow cytometry, imaging techniques such as IHC/IF/ICC, ELISA, Western blotting, and more. We produce primary monoclonal and polyclonal antibodies and secondary antibodies so that you can source all the antibodies necessary for your research from one vendor. We also supply antigen proteins for use in immunoassays.

**Our antibodies
have been
cited over
40,000 times**

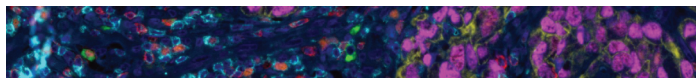

Why choose our antibodies for your R&D?

- We are vertically integrated from immunization to manufacturing and validation
- All of our antibodies are manufactured in-house
- Our antibodies pass strict validation standards

Our catalog includes

- 6,500+ primary antibodies
- 1,200+ secondary antibodies
- 50+ ELISA kits
- 50+ antigen proteins
- And more!

Custom service offerings

- Collaborate with our scientists to develop a custom monoclonal or polyclonal antibody, or a custom IHC or multiplex IF assay
- We offer custom conjugation of any primary antibody in our catalog
