IMMUNO-TROL sera are multiparametric Internal Quality Controls (IQC) for the routine validation of Autoimmune antibody assay techniques including FIDIS™ (xMAP® technology), ELISA and DOT.

Assigned ranges

- Liquid control, ready to use
- Standardised controls
- Identical use and reactivity as patients samples

Convenient

- Universal multi-parametric controls
- Stable material suitable for intra and inter assay validation

Advantages

- Monitor potential drift of analytical systems
- Quality assurance for assay validation
