

# O-WRAP™ Bags

The OriGen Biomedical® **O-WRAP** is designed to contain other freezing bags during long-term frozen storage. The O-Wrap bag is suitable for direct use in liquid nitrogen freezing applications.

*The OriGen O-Wrap overwrap bag can be used as an outer container for CryoStore and PermaLife™ bags during cryopreservation. The O-Wrap bag combines tough, low-temperature durability and excellent clarity.*

## Advantages of the OriGen O-Wrap Bag

### EXCELLENT DURABILITY

The O-Wrap bag is made of EVO copolymer, which has been developed specifically for direct immersion in liquid nitrogen. It remains flexible at liquid nitrogen temperatures and is ideal for cryogenic storage. The bags are supplied as flat pouches, sealed on three sides, with one of the narrow ends open.

### OPTICAL CLARITY

The O-Wrap bag is translucent making inspection of the contents easy, even when frozen.

### EASILY SEALED

The O-Wrap bag is easily sealed at ~105°C with standard RF or inexpensive impulse heat seal equipment. The resulting seal is clear, making it simple to inspect.

### OUR QUALITY STANDARDS

A Certificate of Conformance (CoC) is included with each O-Wrap bag. OriGen's O-Wrap bags are CE marked. OriGen is certified to ISO 13485:2016, MDSAP certified, and all products are manufactured to GMP guidelines.
