

CryoStore™

Freezing Bags

The OriGen CryoStore™ bag is indicated for freezing blood components. It has the traceability, durability, and safety that you need.

Traceability - Heat Welded Lots

A permanent lot number is heat welded into the tail of each bag for easy traceability.

Aliquots - Matched Bag and Tube Printing

Each bag has a donor tube with printed segments of approximately 100uL and a matched number on the bag. This can aid in keeping aliquot samples with the bag.

Durability - Better Material, Proven Performance

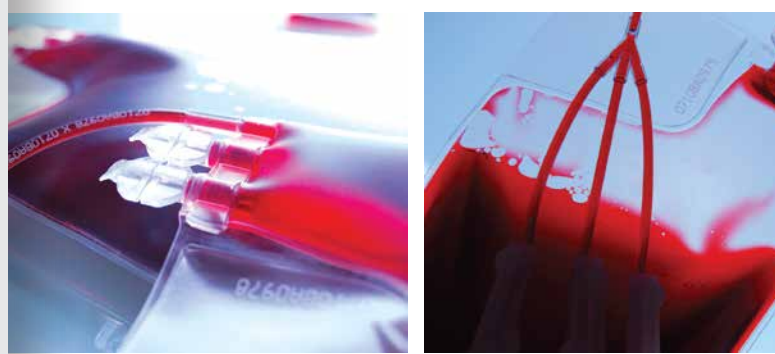

The hermetically sealed spike ports and film used in every CryoStore™ bag are made from a rugged EVA. Our customers have had great success with the strength of the bag over time.

Safety - Needle Free Injection Port

Standard tubing sets now have luer-actuated needle-free injection ports. These swabable ports maintain sterility of the sample through numerous actuations (white paper available) and can eliminate the possibility of needle sticks.

Ease of Use - Designed In

The donor tube is intentionally placed in the corner of the bag for easier de-bubbling and sealing. OriGen can provide your choice of several stock or non-stock tube sets (see reverse). You can order prefabricated multi-bag sets to reduce processing time and the possibility of contamination in the lab.
