# EVOLVE™ Cell Culture Bag

The **EVOLVE™** bag is intended for use in cell culture.

OriGen
BIOMEDICAL

CHEMICALLY INERT
The OriGen Evolve™ cell culture bags are made of EVO copolymer, which contains no plasticizers or chemical residuals.

GAS PERMEABLE, WATER IMPERMEABLE
The Evolve™ bags are gas permeable and provide a high rate of oxygen and carbon dioxide transfer to cells under culture. The bags are water impermeable, so water loss from cell cultures is negligible.

NEEDLE FREE, EASY ACCESS
Swabable, needle free valves are provided on every bag to reduce the risk of contamination and the chance of needle sticks.
These swabable ports retain functionality after numerous actuations. The bags are sold with either luer connections or tubing sets that may be connected to solution transfer pumps. The larger size bags have hermetically sealed spike ports.
OUR QUALITY STANDARDS
A Certificate of Conformance (CoC) is included with each Evolve™ bag. OriGen's Evolve™ bags are FDA registered. OriGen is certified to ISO 13485:2016, and all products are manufactured to GMP guidelines.
