

Immunohistochemistry Selection Guide

Follow the simple steps below to choose the most appropriate labeling and detection solution for your experiment.

1 Choose Primary Antibody

- Specific for antigen of interest
- Consider tissue species and preparation (fixation)
- Consider antigen retrieval requirements

VECTABOND™ Reagent
(Tissue Section Adhesive)

Blocking Reagents

- Choices determined by the options selected in Steps 1-4
- [BLOXALL™ endogenous enzyme blocking reagents \(HRP/AP\)](#)
- [Avidin/Biotin Blocking Kit](#) (if using VECTASTAIN® ABC system)
- [Normal Sera](#) (from the species of secondary antibody)
- [M.O.M.™ Mouse Ig Blocking Reagent](#)
- [Animal-Free Block and Diluent](#)
- [BSA](#)
- [Casein Solution](#)

2 Choose Secondary Antibody and Tertiary Detection System

- Choose HRP or AP enzyme system
- Consider sensitivity requirements
- Consider species of primary antibody
- Consider tissue species

One Step

Convenient. Consistent. Ready-to-use. Non-Biotin based.

- [ImmPRESS™ Polymer Reagents](#)

Two Step

Economical. Biotin-based.

- [Biotinylated secondary antibody](#) + [ABC Complex](#) (VECTASTAIN® Elite® ABC Kit)

Two Step

Highest sensitivity. Non-biotin based.

- [ImmPRESS™ Excel Amplified Polymer Staining Systems](#)

3 Choose Enzyme Substrate

- Color
- Compatibility with other system reagents (counterstains, mounting media and other substrates for multiplexing)

4 Choose Nuclear Counterstain

- Blue, green, or red
- Compatibility with substrate, mounting media

5 Choose Mounting Media

- Aqueous vs. non-aqueous
- Compatibility with substrate(s) and counterstain

6 Visualize

- Brightfield microscope

Small bowel: CD10 (m), VECTASTAIN® Elite® ABC Kit, ImmPACT™ DAB HRP Substrate (brown). Hematoxylin QS counterstain (blue).
