Corporate

Vircell, established in 1991, is a leading developer of ready-to-use kits for the diagnosis of infectious diseases with successful operations in over 75 countries.

With the ultimate aim of bringing efficiency and significant advances to every laboratory, we focus on producing reagents of the highest quality alongside providing accessible technical staff to ensure prompt and personal assistance in the use of these reagents.

Vircell, highly specialized in research & development, offers complete diagnostics solutions by means of different techniques: ELISA, IFA, rapid tests, molecular biology and unique in-house developments.

Single Tests

Enzyme-linked immunosorbent assays for detecting antibodies against infectious diseases in human serum/plasma samples. Vircell ELISA kits vouch for high performance and stability and are suitable for automated systems. G/M presentation allows for all possible combinations of IgG and IgM determinations using a single kit. When detecting IgM antibodies in indirect ELISA, the absorption of IgG takes place directly in the well using VIRCELL ELISA SORBENT. Sample predilution is not required.

Single Tests

Indirect immunofluorescence assays to detect antibodies against viruses, bacteria, parasites and fungi. P- references offer all the necessary reagents to perform the technique: slides, controls, PBS, mounting medium, conjugates and sorbent when necessary. S- references contain slides. IFA is considered a gold standard technique for parameters such as chlamydia, coxiella or bartonella.

Brucellacapt® & Rose Bengal

Brucellacapt® is specially recommended for the diagnosis of chronic brucellosis and treatment follow-up. Based on an immunocapture technique, it allows the detection, in a single step, of the non-agglutinating IgG and IgA antibodies, as well as the agglutinating antibodies. The **Rose Bengal** technique is a fast, simple and sensitive assay widely used as a screening test in the diagnosis of brucellosis.

AmpliRun®. DNA/RNA Amplification Controls

The **AmpliRun® DNA/RNA Amplification Controls** contain the purified complete genome of the infectious agent. This product line has been designed to be used as quantified positive controls in conventional or Real time PCR, enabling the amplification of the desired target. The controls come lyophilized and a resuspension vial is provided within the kit (Molecular Biology Grade Water, free of DNase, RNase).

AmpliRun® Total. Extraction & Amplification Controls

The **AmpliRun® Total Controls** are external run controls to monitor the accuracy and precision of the complete analytical process (extraction and amplification). These noninfectious lyophilized run controls, include the complete inactivated microorganism in a matrix that mimics human specimens. They are ideal for the daily control of molecular assays and instrument performance to aid laboratories in meeting quality and regulatory requirements. Standardized results with lot-to-lot consistency guaranteed.

Speed-oligo®. Oligochromatographic tests

Quick visual oligochromatographic tests. Based on nucleic acid amplification, Speed-oligo® provides all the advantages of molecular biology in quick detection, allowing for an immediate, highly sensitive and specific result. Speed-oligo® contains all reagents necessary to perform the PCR reaction and the detection step. Speed-oligo® is user friendly and avoids the use of toxic substances. The PCR mix is prepared and supplied in lyophilized presentations to prevent contamination. Speed-oligo® technology is unique in the market and makes a multitest molecular diagnosis possible.

Vircell offers an automated reading system that, paired up with sophisticated software, will document the results of the analyzed samples with ease, reducing at the same time the chances for subjectivity.

VIRapid®. Immunochromatographic tests

Immunochromatographic tests for antigen and antibody detection against infectious diseases. VIRapid® allows for a rapid detection with visual or automatic reading in just a few minutes. All necessary reagents are included in the kit and each device includes a product control line. VIRapid® kits are based on specific and highly purified antigens or antibodies, in both conjugates and lines, for more specific and sensitive results.

Vircell offers an automated reading system that, paired up with sophisticated software, will document the results of the analyzed samples with ease, reducing at the same time the chances for subjectivity.

Transport Media

Collection and transport system for virus, chlamydia and mycoplasma. Vircell's transport medium avoids the drying up of the sample, improves microorganisms viability between collection and inoculation and decreases bacterial overgrowth in contaminated samples. It is suitable for samples to be assayed by PCR. The success of virus diagnosis largely depends on the quality of the specimen and the conditions under which the specimen is transported and stored before it is processed in the laboratory.

Cat. No.	Product description	Pack size
TM001	TRANSPORT MEDIUM - 2 ml with sterile Rayon swabs	50 units
TM002	TRANSPORT MEDIUM - 3 ml without swabs	50 units
TM003*	TRANSPORT MEDIUM - 2 ml with 1 sterile Dracon® swab	50 units
TM004	TRANSPORT MEDIUM - 100 ml without swabs	1 unit
TM005*	TRANSPORT MEDIUM - 2 ml without swabs	50 units
TM006*	TRANSPORT MEDIUM - 2 ml with 2 sterile Dracon® swabs	50 units

Cell Lines

Vircell offers most of the cell lines used in cell culture-based microbiological diagnosis, especially those used in human clinical virology. The catalogue includes presentations for the isolation of Cytomegalovirus, Herpes Simplex, respiratory viruses (Influenza, RSV), enterovirus, C. pneumonia, C. trachomatis or Toxoplasma, among others.

The cell lines are supplied in ready to use presentations, shell-vials (VS-) and tubes (VT-), and in other presentations for preparing cell tubes and plates, flasks (FT-) and suspensions (S-).

Monoclonal Antibodies

Inoculation staining and kits. Vircell offers kits containing monoclonal antibodies and controls (staining kits) and complete kits (inoculation and staining kits) for direct investigation of those viruses, bacteria and protozoa associated with human infections, usually diagnosed by cell culture. Complete kits include monoclonal antibody, controls, shell-vials of the appropriate cell line, antibiotic mixture and growth medium.
